

Bachelor of Science in
HEALTH DATA SCIENCE

“Data powers everything we do.”

Jeff Weiner, CEO LinkedIn

Health data science is a new field requiring a diverse set of skills, including data wrangling, analysis, visualization and storytelling. In the next decade, health data scientists will be at the center of reducing healthcare costs by an estimated \$300 billion by creating new technologies, initiatives and big data frameworks. Our students will take direct advantage of the wealth of information available in healthcare today.

The Bachelor of Science in Health Data Science features an interdisciplinary curriculum that integrates biostatistics, computer science and informatics, creating an attractive package for employers locally, nationally and internationally. Graduates will be prepared for jobs in Indiana and beyond, as well as post-graduate educational opportunities.

PROGRAM FEATURES

Minors

- Computer Science
- Informatics

Required Internship Experience

- Eli Lilly
- Roche International
- Healthcare Organizations

“*Medical science is being swept up in a revolution, a revolution as big as the microscope, or the breaking of the DNA code.*

- Atul Butte, Stanford University

23,200

Job Postings
for Data Scientists
